

Executive AI Portfolio Review

A decision meeting, not a status recital. Illustrative structure for discussion.

Meeting output

Every material use case leaves with a named posture - Fund, Shape, Hold, or Stop - plus an owner, next evidence requirement, and decision date.

1. PORTFOLIO PULSE

Question	Evidence	Decision
Where is demand growing?	Use-case intake by function, risk, value thesis, and reuse potential	Capacity allocation
Where is work waiting?	Decision latency segmented by prudent review vs. avoidable queue time	Remove friction or preserve control
Where is value real?	Baseline, realized outcome, adoption, and operating cost	Fund, scale, or stop
Where is trust weak?	Evaluation, data, authority, monitoring, exception, and owner gaps	Shape or hold

2. USE-CASE DECISION RECORD

Clause	Minimum review prompt	Evidence owner
Outcome	Which workflow or decision improves, against what baseline?	Business owner
Legal basis	What authority, obligation, or permitted use supports the work?	Legal / compliance
Risk and harm	What can go wrong, who is affected, and what escalates?	Risk owner
Data and security	What data is needed, protected, retained, logged, or prohibited?	Data / privacy / security
Human authority	Which decisions remain human and where may automation act?	Accountable executive
Operating ownership	Who owns performance, exceptions, adoption, maintenance, and retirement?	Product / operations owner
Evidence and economics	What proof earns the next investment or triggers a stop?	Finance + sponsor

Decision discipline and follow-through

3. POSTURE RULES

Posture	Required executive statement
Fund	The outcome, authority, owner, controls, and evidence justify investment.
Shape	The opportunity is credible; these clauses must be strengthened before release or scale.
Hold	Ambiguity in data, authority, ownership, or evaluation is too material to proceed.
Stop	The use case lacks a defensible basis, controllable risk profile, or sufficient value.

4. MONTHLY LEARNING QUESTIONS

1. Which decision changed because evidence improved?
2. Which control should become reusable?
3. Where did adoption behavior contradict the business case?
4. Which exception reveals a policy, architecture, or ownership gap?
5. Which initiative should stop to release capacity?

5. EXECUTIVE SCORECARD

Measure	Interpretation
Decision latency	Speed, segmented by risk and complexity
Realized outcome	Verified impact against baseline
Control evidence	Quality and coverage of assurance
Workflow adoption	Sustained intended use and exceptions
Reuse ratio	Shared capability vs. duplicated work
Evidence-driven change	Decisions altered by learning

6. CLOSE THE MEETING

For every reviewed initiative, record:

- Posture and rationale
- Named accountable owner
- Next evidence requirement
- Human decision boundary
- Control or architecture dependency
- Funding or capacity implication
- Next decision date

ANTI-BUREAUCRACY TEST

If the review does not change funding, design, release, ownership, escalation, or retirement, it is likely reporting activity rather than governance.
